## **DETAILED ACTION**

1. This application is a national stage entry (371) of PCT/IB03/05696, filed December 1, 2003.
2. Claims 1-15 are currently pending.

### ***Priority***

3. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Information Disclosure Statement***

4. The listing of references in the Search Report (submitted on November 9, 2005) is not considered to be an information disclosure statement (IDS) complying with 37 CFR 1.98. The examiner has listed these references on the attached PTO-892, thereby notifying the applicant that the references have been considered and will be printed on any patent resulting from this application.

### ***Allowable Subject Matter***

5. Claims 1-15 are allowed over the prior art of record.
6. The following is an examiner's statement of reasons for allowance:

The prior art of record alone or in combination fails to teach or suggest:

in claim 1, "*in the event of an error writing data to the optical disc: writing data into an unformatted region of a defect management area of the optical disc at a second data rate which is higher than the first data rate.*"

Claim 8 has similar allowable features as claim 1.

Claims 2-7 & 9-15 are dependent upon allowed base claims.

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Banba et al. (US 4,558,446) disclose a memory system having an information recording area and alternative area to be used for a defective area which might exist in the information recording area, wherein a copy of information recorded in the alternative area is stored in another memory device which can be read at a higher speed than the alternative area is directly read out, and information stored in that memory device is read out when access is made to the defective area.

Usui (US 6,434,100) discloses an optical disc reproducing apparatus wherein if a scratch reproduction is started during a normal-speed reproduction of audio data, and if it is a forward scratch reproduction, a microcomputer controls a clock control circuit to vary the clock read from a memory a memory control circuit so as to control to increase the reproducing speed quickly, while continuing to store the audio data detected from the optical disc on the memory.

Park et al. (US 6,771,575) disclose a defect area management system wherein if a linear replacement would not affect the writing of data, i.e. writing speed faster than the transfer speed, the linear replacement is executed and data corresponding to defective blocks are written into a replacement block in the spare area; while if a linear replacement would detrimentally slow

down the writing, i.e. writing speed is slightly higher than the transfer speed, a skip defective area technique is executed and data corresponding to defective blocks are written into normal blocks following the defective blocks.

Endo et al. (US 7,242,642) disclose an optical disk high-speed replaying /recording apparatus which reads and reproduces data recorded on an optical disk at a speed higher than the normal replay speed of the optical disk, and records the reproduced data on a writable/rewritable optical disk except defective data caused by reproduction defects.

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Peter Agustin whose telephone number is (571)272-7567. The examiner can normally be reached on Monday-Thursday 8:30 AM-6:30 PM.
